

Principle Suite

If your business is still capturing any manual processes or procedures on paper or e-forms, then Principle Suite will enable the real-time capturing and review of data, saving your business time and money, by enhancing your workforce processes, aiding productivity, auditing, conformity and business decisions.

People. Process. Information. Audit. Compliance.

Real-time Data

capture improves efficiency

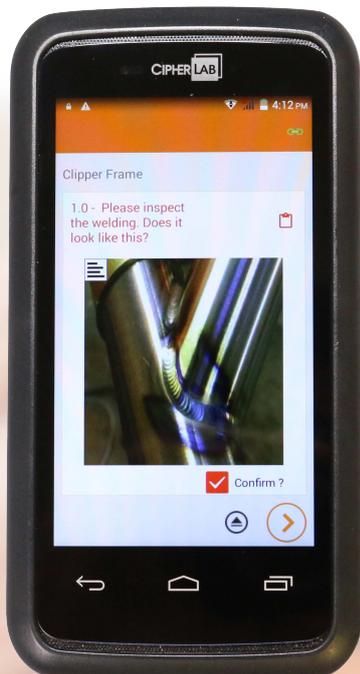

Principle Suite allows real-time capture for any task related quality control checks and processes. We provide our customers with a fully customisable tool ensuring business critical information is available in real-time.

How will it enhance my business?

If your business is still capturing any manual processes or procedures on paper or e-forms, then Principle Suite will enable the real-time capturing and review of data, saving your business time and money, by enhancing your workforce processes, aiding productivity, auditing, conformity and business decisions.

The system can be used to manage compliance, drive continuous performance improvement and monitor the outcomes of conformity and root cause analysis.

Significantly reduces human-error and negates transcription mistakes, made possible through the intuitive digital hand-held devices. The devices ensure that handwriting interpretation and typing errors and abbreviations are eliminated.

All the entries are time and date stamped to the individual operator and records can, if necessary, incorporate a digital signature for further authenticity. This enhanced level of information provides businesses with greater visibility to make decisions more efficiently whilst ensuring compliance standards are maintained. The system provides additional business intelligence enabling customers to make important commercial decisions, which will deliver greater profitability.

With all real time data received by the core Principle Suite system, automation of non conformance and resolution through to root cause provide a complete back office workflow and process solution for remedial action.

Real-time Reporting

act on facts fast

Principle Suite can be used to monitor, manage and enhance:

- Compliance and auditing
- Continuous process improvement
- Reduce Human error
- Business intelligence
- Security

It can be used in many different areas of a business, some key areas include:

- Quality Control
- Health & Safety
- Internal and Supplier Auditing
- Production Control
- Hygiene Control
- ISO Compliance
- Records Management

Benefits:

- Substantial time saving to the business
- Substantial paper saving aiding Green Credentials
- Improved process efficiency and performance
- Paperless auditing is ideal for compliance
- Integrated, customisable and scalable
- Real-time procedure visibility

How does it work?

The system is an off the shelf solution and fully customisable by the end user. This facilitates the centralised recording and control of any document, processes or procedures in a single application, previously managed across multiple systems.

Areas of use/reporting

Examples of Report Practice

- Comparing non-conformances between areas over a period of time
- Comparing non-conformances by products or locations
- Identifying non-conformance trends

Areas of Use

- Quality Control
- Process Control
- Hygiene
- Health & Safety
- Small Business Management
- Internal and External Audits
- Franchise Management
- Multi-National Management
- Facilities Management

Typical User Area

- Internal Company Audits Of ISO 9001
- Instrument Calibrations
- Preventative Maintenance
- Health and Safety Assessments
- Quality Control Department
- Income and Dispatch Inspections
- Production Line
- Equipment and Site Inspection

Moved to real-time data capture

CASE STUDY

Applied Principles have been working closely with Morrisons Worsley (formally Simply Fresh) since 2009. In this time we have removed paperwork from various sections of the plant and ensured quality standards are maintained and are easily visible.

"The level of 'noise' about quality has risen perceptibly, from the canteen to the factory floor. The system forces everybody to be accountable and take pride in what we produce and because the system creates a uniformity of standards across shifts, everyone is working to the same goal"

- Jill Tolan - Technical Manager at Morrisons Worsley

Additional Functionality

Additional functionality that was added in version 2.1 during 2011 includes the following:

- Raw material
- Out load checks
- Daily glass & plastic checks
- Barcode verification
- Glass and plastic audits

System Usage

The system within the Worsley site consists of Hornet.2 data capture devices, *Principle Suite*™ Version 2.1 and also the APMQM reporting module. The *principle Suite*™ system is currently used for the following:

- Raw material
- Out load checks
- Daily glass & plastic checks
- Barcode verification
- Glass & plastic audits
- Metal detector checks
- Chlorine checks
- Housekeeping audits
- Temperature checks

Improvements

Improvements have included the following:

Improved decision making
process especially at 'Goods-In'

Removed
paper within the plant by
75%
in 12 months

Rolled out to second factory
in 12 months

Improved confidence
during auditing with
computerised systems

Reduced administration time by
25%
in 12 months

Improved visibility
of non-conformance's

Assisted in ensuring BRC Grade A

Business Solutions

Applied Principles Business Solutions combine leading technology with business process know-how.

Expertise and experience

Applied Principles has been at the forefront of information management systems for over 9 years. As information flow has become faster and more complex our role has evolved to include essential business process automation around Compliance, Quality Control, Health & Safety, Supplier Management and Maintenance.

Our expertise in facilitating efficient working practices now helps organisations across the UK and Europe to get more from their technology. This expertise has now been formally brought together as a family of Applied Principles and Therefore.

Delivering information advantage

For all kinds of organisation, large to small, Applied Principles gives people the tools to work better with their information. Our experts are on hand to help uncover efficiency savings, help you meet regulatory compliance and auditing requirements.

Smarter, scalable approaches

Applied Principles solutions are made to fit your organisation. Our consultants design solutions based on sound best practice that meet your operational needs. This means implementation is quicker and easier, your personnel have a better user experience and your business benefits from faster ROI.

Simple steps

The first step to improving your processes is an informal scoping meeting where you can discuss your particular process challenges with us. Based on this, we can explore what kind of solution would be suitable for you and what the likely benefits would be.

Find out more

Visit www.appliedprinciples.eu to see how simple changes to the way you manage and process your information can make a big difference.
